We've teamed up with our power supplier, WPPI Energy, and its other 50 locally owned member utilities to offer grant funding to customer-sited project resources through a competitive bid process. The objective of this request for proposal program is to offer grant funding to customer-sited project resources for WPPI Energy and its members through a competitive bid process. These incentives will aid in the development of selected projects specifically targeted at non-profit organizations, helping them lower their energy costs and promote their environmental commitment. WPPI Energy will provide grants ranging from \$5,000 to \$25,000 to selected renewable energy projects interconnected to member utility distribution systems. These grant levels are expected to best apply to solar PV projects up to 20 kW and wind projects up to 10 kW.

PROGRAM ELIGIBILITY

- Open to 501(c)(3) IRS qualified entities, non-profit schools, colleges, universities or other higher learning institutes and units of government receiving electric service from a WPPI Energy member utility.
- Eligible customers may "bid" for the required incentive award needed to implement their renewable energy project and meet their company financial hurdles.
- Projects must be located at and owned by the non-profit entity for the duration of the project life.
- Projects must be interconnected to the member utility distribution system and meet all regulatory or utility requirements for interconnection.
- Projects must generate electrical energy. Examples include solar PV, wind turbine generation, micro-turbine burning waste methane to generate electricity.

APPLICATION DETAILS

The site assessment must be performed by an assessor holding an appropriate MREA Site Assessment Certificate or a NABCEP Certified Technical Sales or Installation Professional.

All bids will be reviewed, and ranked with the highest ranking bids funded first until available funds are expended.
