

WANT SOLAR?

EVANSVILLE WATER & LIGHT CAN HELP. WE RECOMMEND THESE BEST PRACTICES.

Reach out to us. We can help you think through important questions like: Should my solar array be ground or roof mounted? Would my solar project receive any shading? What types of incentives am I eligible for?

Contact local solar installation companies. Get at least 3 quotes and compare the total costs and payback periods of the different systems. Based on Evansville's historical and likely stable future energy prices, savings claims may be inflated to make the solar project appear more attractive than what will be the actual results. If you have any concerns or questions, please contact us at 608-345-0683.

Complete required interconnection documents. The Distributed Generation Application and Solar Photovoltaic Supplemental Application Form can be found at www.ci.evansville.wi.gov.

Obtain local permits. All solar arrays require a building permit, and some may require Plan Commission approval. Commercial roof top systems require a structural analysis.

Installation and inspection. After installation of your solar equipment, a final inspection is required by our local building inspector and Evansville Water & Light.
