Site plan Attach a site plan (11" x 17") that depicts the following (1) property boundary lines of the subject parcel (2) approximate location of all floodplain boundaries in the vicinity of the project as depicted on the floodplain maps which are available from the Community Development Director (3) location of existing improvements (5) location of existing natural features (such as swales, streams, ponds (6) location of all proposed improvements.

Evansville, Wisconsin Version: December 2017

Project information. Indicate which of the following types of activities are included in the project and provide the information as listed. The Community Development Director may ask for additional information following a preliminary review of the application.

Yes	No	Type of Project	Type of Preliminary Information Required
		Placement of fill (no other development involved)	(1) calculations for the amount of fill to be placed within the 100-year floodplain (2) a map showing where the fill will be placed
		Construction of a residence or addition	(1) existing ground elevation where the residence or addition is to be built and the calculated height of the 100-year floodplain at that location (2) calculations for the amount of fill that will be placed around the perimeter of the building
		Construction of a nonresidential building or addition	(1) existing ground elevation where the building or addition is to be built and the calculated height of the 100-year floodplain at that location (2) calculations for the amount of fill that will be placed around the perimeter of the building and/or description of how the building will meet the design standards as may be appropriate
		Stabilization of a stream bank	(1) description of existing conditions (2) historical overview of trends in stream movement, if any (3) description of the problem (4) description of the objectives for the project (5) plan view of the project area which shows the beginning and ending points of the treatment and the types of treatment to be used (6) a typical cross-section (based on survey data) of the stream from bank to bank, which shows the existing condition and proposed treatment and the height of the 100-year flood event, the base flow elevation, and the bankfull elevation (7) description of the design alternatives considered, but which were rejected (8) specifications for the treatment material (type, sizes, quantities, etc.) (9) description of the project implementation (project phases, sediment control, staging area, cleanup, etc.)
		Watercourse alteration	(1) description of existing conditions; (2) description of the objectives for the project (3)) plan view of the project area which shows the beginning and ending points of the relocation and the types of treatment
		Construction of a bridge or dam or installation of a culvert	(1) drawings and specifications as certified by a professional engineer (2) calculations for the amount of fill to be placed in the floodplain (3) cross-section of the stream at the location of the bridge which shows the existing condition and the elevations of the 100-year flood event and the lowest part of the bridge
		Construction of a road or similar facility	(1) description of existing conditions (2) description of the objectives for the project (3) calculations for the amount of material to be placed in the floodplain (4) calculations to show that the culvert(s) will be large enough to handle expected flows
		Installation of a dock, pier, navigational aid, or similar structure	dimensions and other specifications
		Development of a pond or alteration	(1) description of existing conditions; (2) description of the objectives for the project (3) calculations for the amount of material to be removed from the pond (4) description of where the material will be placed outside of the floodplain
